New Animations Highlight High-Speed Rail Signature Structures on the North and South Ends of Fresno

FRESNO, Calif. – The California High-Speed Rail Authority (Authority) has released two new animations highlighting signature structures in Construction Package 1 (CP 1). The San Joaquin River Viaduct will feature arches representing the northern gateway into Fresno and will also feature a pergola structure in order to cross over the top of the Union Pacific tracks. The Cedar Viaduct consists of arches spanning State Route 99 on the southern end of Fresno and will allow high-speed trains to pass over State Route 99, as well as North and Cedar Avenues and avoid any at-grade crossings.

There are currently eight active construction sites within CP 1. CP 1 is the first 32-mile stretch of the high-speed rail under construction between Avenue 19 in Madera County to East American Avenue in Fresno County.

For additional images and the latest on construction activities visit BuildHSR.com.
